

SP 63 Mobile

Welding technology
to gain more flexibility

Features

- Highly flexible due to separated clamping tool
- Low weight - highly portable
- Compact design
- Overhead welding possible
- RFID data input
- Simple operation via intuitiv display
- Complete welding documentation for easy validation
- Data export via USB stick

Applications areas

- Pharmaceutical industry
- Biotech industry
- Dialyses facilities
- Hospitals and laboratories
- Food and beverage industry
- Dairy industry
- Chemical industry
- Semiconductor industry
- HP applications

To comply with the highest standards on the markets, AGRU developed an infrared welding machine to provide top quality even in difficult welding positions. Outstanding welding quality and the possibility to perform overhead welds underline just a few features of the new SP 63 Mobile. Due to its low weight, the welding machine copes with every situation and performs top welding results.

All welds are documented and users are able to download them via USB stick directly from the welding machine. In order to ensure a safe operation, we implemented a login screen via welder cards.

The SP 63 Mobile is available for dimensions with OD 20 mm (1/2") to OD 63 mm (2").
