

SP 110-B

Beadless Welding Technology

Features:

- Fully automated welding process
- Beadless welding joint to comply with highest standards
- Barcode - RFID data input
- Computer based service timing
- Simple operation via touch screen
- Complete welding documentation for easy validation
- Data export via USB stick

Applications areas:

- Pharmaceutical industry
- Biotech industry
- Dialyses facilities
- Hospitals and laboratories
- Food and beverage industry
- Dairy industry
- Chemical industry
- Semiconductor industry
- HP applications

The SP 110-B was developed to comply with the highest standards on the market. Outstanding welding joint quality as well as the simplicity in operating the machine underline just a few features of the new SP 110-B. The welds can be produced completely beadless to get used in life science-, semiconductor- as well as in food and beverage industry.

All welds are documented and users are able to download them via USB stick directly from the welding machine. In order to ensure a safe operation, we implemented a login screen via welder cards.

The SP 110-B is available for dimensions from OD 20 mm (1/2") to OD 110 mm (4").
